# ENERGY AND CHANGE

SCIENCE TRAIL

Years 8 to 10

[theworkshops.qm.qld.gov.au](http://theworkshops.qm.qld.gov.au)

t. 07 34-32 5100 | North Street, North Ipswich Qld 4305

open daily 9:30am-5:00pm

(except Good Friday, ANZAC Day & Christmas Day)

This program has been produced and published by The Workshops Rail Museum, North Street, North Ipswich, Qld, Australia 4305.

The Museum's Vision Statement is:

*to be recognised as a creative, innovative and exciting journey of discovery into Australia's rail story.*

The Mission Statement is:

*to harness the significance of the Workshops precinct by delivering international standard cultural and tourism related activities, education and public programs associated with the interaction of rail on people's lives.*

Education Programs produced by The Workshops Rail Museum whether in hard copy or accessed from the Museum's internet web site are able to be reproduced and used by educational and like institutions for educational purposes free of charge.

Programs cannot be reproduced or used for commercial purposes in any form. All programs, their contents and their images remain the property of The Workshops Rail Museum or other therein acknowledged sources, and normal copyright laws apply.

This program ©The Workshops Rail Museum 2013

## **Purpose and Overview**

The following questions and activities are based on the Science Stations and other exhibits at The Workshops Rail Museum. They are aimed at helping students to develop an understanding of energy and change and how they can be used in real life contexts.

These activities are aligned with the Australian Curriculum: Science content strands of *Science Understanding*, *Science as a Human Endeavour*, and *Science Enquiry Skills* for Years 8, 9 and 10.

Students will further develop and apply their knowledge and understanding of the following areas:

- Science Understanding – Physical sciences
- Science as Human Endeavour – Use and influence of science
- Science Enquiry Skills – Questioning and predicting; Planning and conducting; Processing and analysing data and information; Evaluating; and Communicating

## **Context for learning**

This worksheet explores ideas related to science as a human endeavour and explores how machines using energy change processes can create devices that are environmentally friendly and more energy efficient than those currently in use today.

<b>Title:</b> Energy and Change: Machines Challenge	<b>KLA(s):</b> Science (English)	<b>Year level(s):</b> 8, 9, 10
---	----------------------------------	--------------------------------

### CURRICULUM LINKS

SCIENCE UNDERSTANDING	SCIENCE AS HUMAN ENDEAVOUR
<b>Physical Sciences</b>	<b>Use and Influence of Science</b>
<p><b>YEAR 8</b> Energy appears in different forms including movement (kinetic energy), heat and potential energy, and causes change within systems (<b>ACSSU155</b>)</p> <p><i>Elaboration:</i></p> <ul style="list-style-type: none"> <li>investigating different forms of energy in terms of the effects they cause, such as gravitational potential causing objects to fall and heat energy transferred between materials that have a different temperature</li> </ul> <p><b>YEAR 9</b> Energy transfer through different mediums can be explained using wave and particle models (<b>ACSSU182</b>)</p> <p><i>Elaboration:</i></p> <ul style="list-style-type: none"> <li>exploring how and why the movement of energy varies according to the medium through which it is transferred</li> </ul> <p><b>YEAR 10</b> The motion of objects can be described and predicted using the laws of physics (<b>ACSSU229</b>)</p> <p><i>Elaboration:</i></p> <ul style="list-style-type: none"> <li>gathering data to analyse everyday motions produced by forces, such as measurements of distance and time, speed, force, mass and acceleration</li> </ul>	<p><b>YEAR 8</b> Science and technology contribute to finding solutions to a range of contemporary issues; these solutions may impact on other areas of society and involve ethical considerations (<b>ACSHE135</b>)</p> <p><i>Elaborations:</i></p> <ul style="list-style-type: none"> <li>investigating requirements and the design of systems for collecting and recycling household waste</li> <li>investigating how energy efficiency can reduce energy consumption</li> <li>investigating the development of vehicles over time, including the application of science to contemporary designs of solar-powered vehicles</li> </ul> <p><b>YEAR 9</b> The values and needs of contemporary society can influence the focus of scientific research (<b>ACSHE228</b>)</p> <p><i>Elaborations:</i></p> <ul style="list-style-type: none"> <li>investigating how energy efficiency can reduce energy consumption</li> <li>investigating the development of vehicles over time, including the application of science to contemporary designs of solar-powered vehicles</li> </ul> <p><b>YEAR 10</b> The values and needs of contemporary society can influence the focus of scientific research (<b>ACSHE230</b>)</p> <p><i>Elaboration:</i></p> <ul style="list-style-type: none"> <li>considering innovative energy transfer devices, including those used in transport and communication</li> </ul>

SCIENCE INQUIRY SKILLS		
<b>Questioning and Predicting</b>		
<p><b>YEAR 8</b></p> <p>Identify questions and problems that can be investigated scientifically and make predictions based on scientific knowledge <b>(AC SIS139)</b></p> <p><b>Elaborations:</b></p> <ul style="list-style-type: none"> <li>considering whether investigation using available resources is possible when identifying questions or problems to investigate</li> </ul>	<p><b>YEAR 9</b></p> <p>Formulate questions or hypotheses that can be investigated scientifically <b>(AC SIS164)</b></p> <p><b>Elaborations:</b></p> <ul style="list-style-type: none"> <li>revising and refining research questions to target specific information and data collection or finding a solution to the specific problem identified</li> <li>developing ideas from students own or others' investigations and experiences to investigate further</li> </ul>	<p><b>YEAR 10</b></p> <p>Formulate questions or hypotheses that can be investigated scientifically <b>(AC SIS198)</b></p> <p><b>Elaborations:</b></p> <ul style="list-style-type: none"> <li>developing ideas from students own or others' investigations and experiences to investigate further</li> <li>evaluating information from secondary sources as part of the research process</li> </ul>
<b>Planning and Conducting</b>		
<p><b>YEAR 8</b></p> <p>Collaboratively and individually plan and conduct a range of investigation types, including fieldwork and experiments, ensuring safety and ethical guidelines are followed <b>(AC SIS140)</b></p> <p><b>Elaboration:</b></p> <ul style="list-style-type: none"> <li>working collaboratively to decide how to best approach an investigation</li> </ul>	<p><b>YEAR 9</b></p> <p>Plan, select and use appropriate investigation methods, including field work and laboratory experimentation, to collect reliable data; assess risk and address ethical issues associated with these methods <b>(AC SIS165)</b></p> <p><b>Elaboration:</b></p> <ul style="list-style-type: none"> <li>combining research using primary and secondary sources with students' own experimental investigation</li> </ul>	<p><b>YEAR 10</b></p> <p>Plan, select and use appropriate investigation methods, including field work and laboratory experimentation, to collect reliable data; assess risk and address ethical issues associated with these methods <b>(AC SIS199)</b></p> <p><b>Elaborations:</b></p> <ul style="list-style-type: none"> <li>combining research using primary and secondary sources with a student's own experimental investigation</li> <li>using modelling and simulations, including using digital technology, to investigate situations and events</li> </ul>
<b>Processing and Analysing Data and Information</b>		
<p><b>YEAR 8</b></p> <p>Construct and use a range of representations, including graphs, keys and models to represent and analyse patterns or relationships, including using digital technologies as appropriate <b>(AC SIS144)</b></p> <p><b>Elaboration:</b></p> <ul style="list-style-type: none"> <li>explaining the strengths and limitations of representations such as physical models, diagrams and simulations in terms of the attributes of systems included or not included</li> </ul>	<p><b>YEAR 9</b></p> <p>Use knowledge of scientific concepts to draw conclusions that are consistent with evidence <b>(AC SIS170)</b></p> <p><b>Elaboration:</b></p> <ul style="list-style-type: none"> <li>comparing conclusions with earlier predictions and reviewing scientific understanding where appropriate</li> </ul>	<p><b>YEAR 10</b></p> <p>Use knowledge of scientific concepts to draw conclusions that are consistent with evidence <b>(AC SIS204)</b></p> <p><b>Elaboration:</b></p> <ul style="list-style-type: none"> <li>constructing a scientific argument showing how their evidence supports their claim</li> </ul>

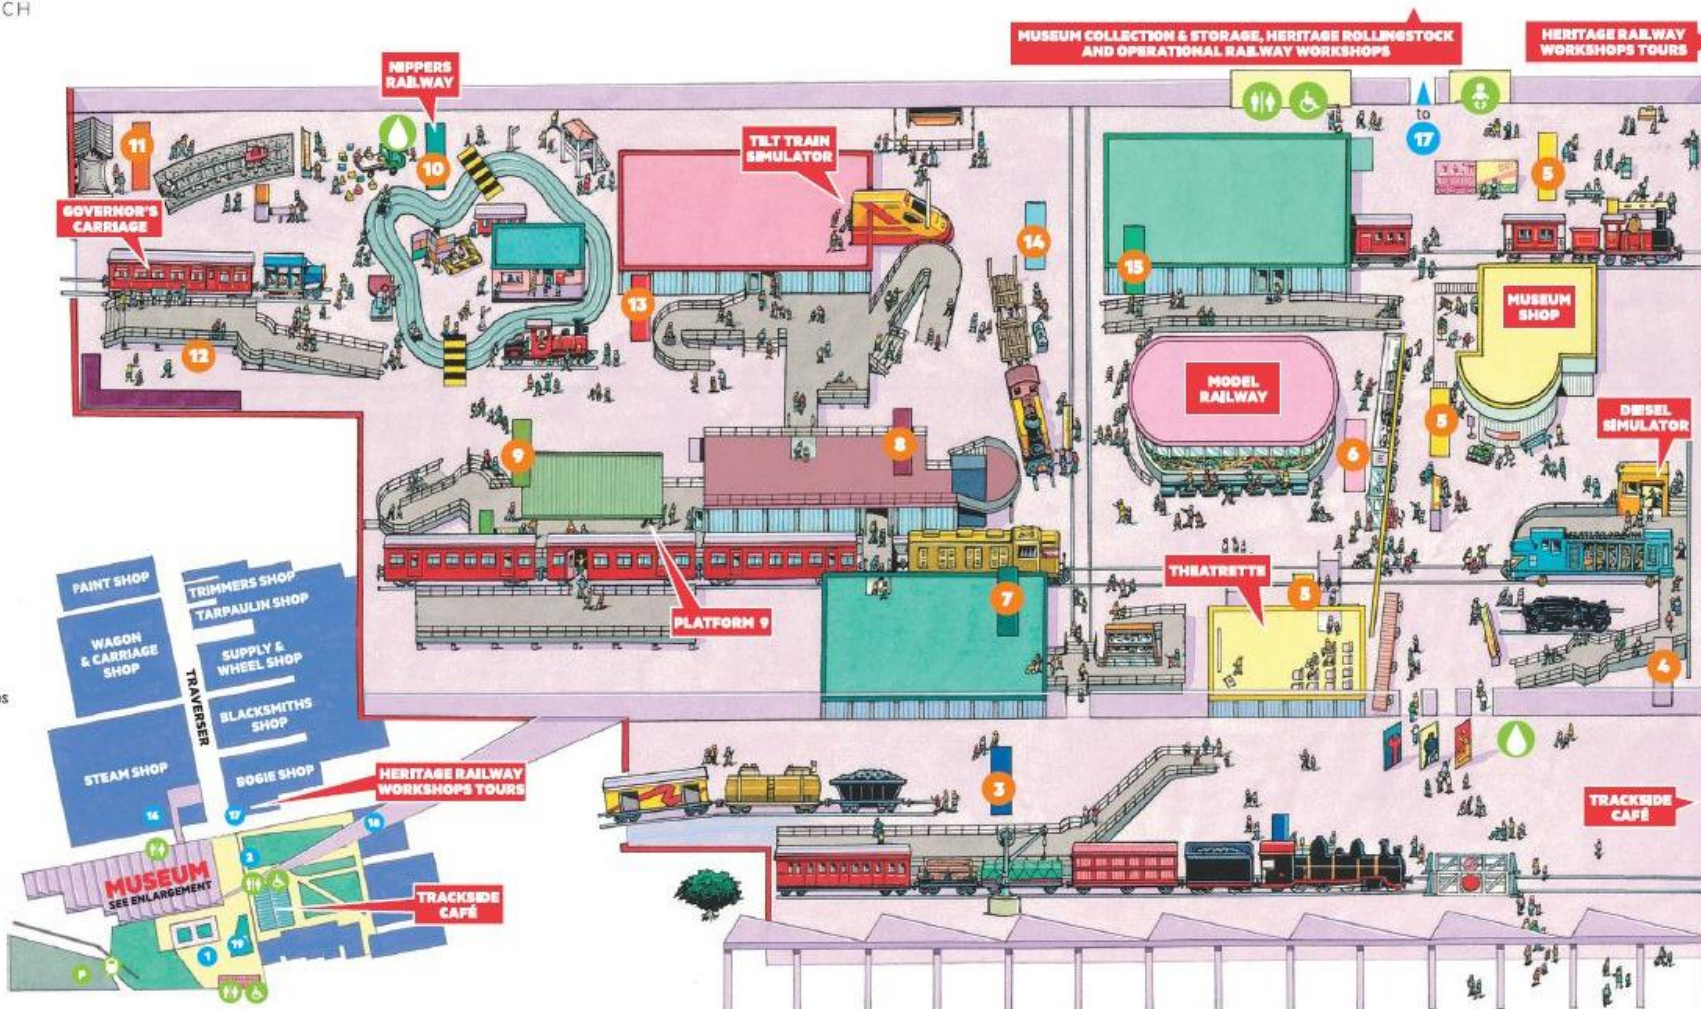

<b>Evaluating</b>		
<p><b>YEAR 8</b></p> <p>Reflect on the method used to investigate a question or solve a problem, including evaluating the quality of the data collected, and identify improvements to the method <b>(AC SIS146)</b></p> <p><b>Elaboration:</b></p> <ul style="list-style-type: none"> <li>discussing investigation methods with others to share ideas about the quality of the inquiry process</li> </ul>	<p><b>YEAR 9</b></p> <p>Evaluate conclusions, including identifying sources of uncertainty and possible alternative explanations, and describe specific ways to improve the quality of the data <b>(AC SIS171)</b></p> <p><b>Elaborations:</b></p> <ul style="list-style-type: none"> <li>identifying gaps or weaknesses in conclusions (their own or those of others)</li> <li>identifying alternative explanations that are also consistent with the evidence</li> </ul>	<p><b>YEAR 10</b></p> <p>Evaluate conclusions, including identifying sources of uncertainty and possible alternative explanations, and describe specific ways to improve the quality of the data <b>(AC SIS205)</b></p> <p><b>Elaborations:</b></p> <ul style="list-style-type: none"> <li>evaluating the strength of a conclusion that can be inferred from a particular data set</li> <li>identifying alternative explanations that are also consistent with the evidence</li> </ul>
<b>Communicating</b>		
<p><b>YEAR 8</b></p> <p>Communicate ideas, findings and solutions to problems using scientific language and representations using digital technologies as appropriate <b>(AC SIS148)</b></p> <p><b>Elaboration:</b></p> <ul style="list-style-type: none"> <li>selecting and using appropriate language and representations to communicate science ideas within a specified text type and for a specified audience</li> </ul>	<p><b>YEAR 9</b></p> <p>Communicate scientific ideas and information for a particular purpose, including constructing evidence-based arguments and using appropriate scientific language, conventions and representations <b>(AC SIS174)</b></p> <p><b>Elaboration:</b></p> <ul style="list-style-type: none"> <li>presenting results and ideas using formal experimental reports, oral presentations, slide shows, poster presentations and contributing to group discussions</li> </ul>	<p><b>YEAR 10</b></p> <p>Communicate scientific ideas and information for a particular purpose, including constructing evidence-based arguments and using appropriate scientific language, conventions and representations <b>(AC SIS208)</b></p> <p><b>Elaboration:</b></p> <ul style="list-style-type: none"> <li>presenting results and ideas using formal experimental reports, oral presentations, slide shows, poster presentations and contributing to group discussions</li> </ul>
<b>General capabilities</b>		
<ul style="list-style-type: none"> <li><b>Literacy:</b> Students communicate scientific ideas, explanations, conclusions, decisions and data, using scientific argument and terminology, in appropriate formats</li> <li><b>Critical and creative thinking:</b> Students evaluate data, information and evidence to identify connections, construct arguments and link results to theory and draw conclusions that summarise and explain patterns, and that are consistent with the data and respond to the question</li> <li><b>Sustainability:</b> Students use science to predict possible effects of human and other activity, and to develop management plans or alternative technologies that minimise these effects in their machine challenges</li> <li><b>Numeracy:</b> Students use spatial reasoning through visualising 2D shapes and 3D objects, and record and analyse data</li> <li><b>Personal and social capability:</b> Students reflect on different perspectives and evaluate the influence of people's values and culture on the applications of science</li> <li><b>Intercultural understanding:</b> Students consider and develop multiple perspectives</li> <li><b>Personal and social capability:</b> Students demonstrate collaboration skills, decision making and self-management</li> <li><b>Ethical understanding:</b> Students reason and make ethical decisions and consider consequences</li> </ul>		

Develop assessment			Make judgments	
Type of assessment	What will be assessed	When it will be assessed	Purpose of assessment	Assessable elements
Presentation of Challenges and their solutions to class  Folio of data collected and records of experiments conducted	Students ability to apply information gathered in experiments to solving problems	Ongoing and at presentation of Challenges	To demonstrate students' knowledge, understanding and application of the relevant scientific concepts	Knowledge and understanding  Investigating Communicating Reflecting

Learning Sequence	
Learning experiences and teaching strategies	Resources
<ol style="list-style-type: none"> <li>1. Pre-visit               <ol style="list-style-type: none"> <li>a. Break students into small groups</li> <li>b. Handout challenges to groups</li> <li>c. Students read fact sheets on the Science Stations they will be looking at in the Museum</li> </ol> </li> <li>2. Visit to The Workshops Rail Museum (TWRM)               <ol style="list-style-type: none"> <li>a. Students participate in an introductory session with the Learning, Events and Activities Officer - optional</li> <li>b. Students move through the Museum find the Science Stations and other exhibit zones relevant to their challenge and experiment and gather data</li> </ol> </li> <li>3. Post visit               <ol style="list-style-type: none"> <li>a. Students complete the <b>Solving your Challenge</b> section of the worksheet</li> <li>b. Students present their findings to the class.</li> <li>c. Students use class discussion to critically reflect on the different solutions and to exchange ideas regarding the positives and negatives of each solution.</li> </ol> </li> </ol>	<ul style="list-style-type: none"> <li>• Energy Change and Machines Worksheet</li> <li>• Science Station Fact Sheets (contact the Learning, Events and Activities Officer at <a href="mailto:info@theworkshops.qm.qld.gov.au">info@theworkshops.qm.qld.gov.au</a>)</li> </ul>

## Science Station Challenges: Energy and change

Challenge	Key ideas	Stations & Exhibitions
1. Energy efficient device to separate out paper, glass and metal rubbish collected from trains.	<ul style="list-style-type: none"> <li>• Magnetic materials</li> <li>• Forces on objects</li> <li>• Floating objects in air</li> </ul>	<ul style="list-style-type: none"> <li>• Magnetism from electricity</li> <li>• Jumping disc</li> <li>• Floating magnets</li> <li>• Air blast</li> <li>• Fluid coupler</li> <li>• Electric motor</li> </ul>
2. Energy device that could harness some of nature's "free" energy for use by the train system.	<ul style="list-style-type: none"> <li>• Electromagnetism</li> <li>• Energy converters</li> <li>• High voltage electricity</li> <li>• Magnetic forces</li> </ul>	<ul style="list-style-type: none"> <li>• Magnetic shuttle</li> <li>• Jumping disc</li> <li>• Flywheels</li> <li>• Rising arc</li> <li>• Magnetism from electricity</li> <li>• Electric motor</li> <li>• <i>Diesel revolution</i></li> <li>• <i>Rail into the future</i></li> </ul>
3. A simple machine to lift a 200kg wool bale into the back of a rail wagon.	<ul style="list-style-type: none"> <li>• Simple machines</li> <li>• Levers and gears</li> <li>• Power driven machines</li> <li>• Mechanical advantage</li> </ul>	<ul style="list-style-type: none"> <li>• Levers</li> <li>• Gears</li> <li>• Electric motor</li> <li>• <i>Moving goods: Crane</i></li> </ul>
4. A train that uses magnetic attraction / repulsion for propulsion as well as for direction.	<ul style="list-style-type: none"> <li>• Magnetic attraction</li> <li>• Magnetic repulsion</li> <li>• Electromagnetism</li> <li>• Magnetic levitation</li> </ul>	<ul style="list-style-type: none"> <li>• Magnetic shuttle</li> <li>• Floating magnets</li> <li>• Magnetic field</li> <li>• Magnetism from electricity</li> <li>• <i>Rail into the future</i></li> </ul>
5. A theme park ride that does not require constant propulsion by an engine.	<ul style="list-style-type: none"> <li>• Energy converters</li> <li>• Energy sources</li> <li>• Magnetic repulsion</li> <li>• Forces on tracks</li> </ul>	<ul style="list-style-type: none"> <li>• Train wheels</li> <li>• The flywheel</li> <li>• Air blast</li> <li>• Jumping disc</li> <li>• Catenary arch</li> <li>• <i>Might and muscle</i></li> </ul>
6. A faster and more energy efficient train: consider methods of propulsion as well as track design.	<ul style="list-style-type: none"> <li>• Magnetic forces</li> <li>• Electromagnetism</li> <li>• Energy storage</li> <li>• Energy converters</li> <li>• Balancing forces</li> </ul>	<ul style="list-style-type: none"> <li>• Magnetic shuttle</li> <li>• Floating magnets</li> <li>• Magnetism from electricity</li> <li>• Flywheels</li> <li>• Electric motor</li> <li>• <i>Rail into the future</i></li> </ul>

## ENERGY CHANGE AND MACHINES STUDENT CHALLENGE #1

Design an energy efficient device that can be used to sort these recyclable materials – steel cans, plastic containers, glass bottles, newspapers, cardboard, milk and fruit juice cartons.

This device must not have a motor that relies on the use of fossil fuels.

Investigate these hands-on stations:

- Air blast (in *Zone 4: Diesel Revolution*)
- Magnetism from electricity
- Jumping disc
- Floating magnets
- Fluid coupler
- Electric motor

### SUGGESTIONS FOR INVESTIGATING THE HANDS-ON EXPERIMENTS

Follow the instructions on the device and record what happens.

What we tried	What happened

- Why did that happen?
- What type of energy is being used?

### Solving your Challenge

- Brainstorm with your group for ideas.
- Base your ideas on what you have found out about your hands-on science stations.
- You may draw diagrams or write an explanation of the device you have designed to solve your challenge.

**To solve your challenge you will need to look closely at the:**

- Objects
- Hands-on experiments
- Information panels at the energy change and machines Science Stations

You will need to use the scientific ideas from the hands-on experiments, not the devices themselves to help solve your challenge.

Key ideas:

- Magnetic materials
- Forces on objects
- Floating objects in air

## ENERGY CHANGE AND MACHINES STUDENT CHALLENGE #2

Design an energy device that could harness some of nature's "free" energy for use by the train system.

You must first decide what function your device will perform and what "free" energy you will use. Investigate these hands-on stations:

- Magnetic shuttle (in *Zone 13: Rail Today*)
- Jumping disc (in *Zone 13: Rail Today*)
- Flywheels
- Rising arc
- Magnetism from electricity
- Electric motor

### SUGGESTIONS FOR INVESTIGATING THE HANDS-ON EXPERIMENTS

Follow the instructions on the device and record what happens.

What we tried	What happened

- Why did that happen?
- What type of energy is being used?

### Solving your Challenge

- Brainstorm with your group for ideas.
- Base your ideas on what you have found out about your hands-on science stations.
- You may draw diagrams or write an explanation of the device you have designed to solve your challenge.

To solve your challenge you will need to look closely at the:

- Objects
- Hands-on experiments
- Information panels at the energy change and machines Science Stations

You will need to use the scientific ideas from the hands-on experiments, not the devices themselves to help solve your challenge.

Key ideas:

- Electromagnetism
- Energy converters
- High voltage electricity
- Magnetic forces

## ENERGY CHANGE AND MACHINES STUDENT CHALLENGE #3

Design a simple machine to lift a 200kg wool bale into the back of a rail wagon.

You must first investigate different types of simple machines that might be useful for lifting.

Investigate these hands-on stations

- *Zone 3: Moving goods - Crane*
- Levers
- Gears
- Electric motor

### SUGGESTIONS FOR INVESTIGATING THE HANDS-ON EXPERIMENTS

Follow the instructions on the device and record what happens.

**To solve your challenge you will need to look closely at the:**

- Objects
- Hands-on experiments
- Information panels at the energy change and machines Science Stations

You will need to use the scientific ideas from the hands-on experiments, not the devices themselves to help solve your challenge.

Key ideas:

- Simple machines
- Levers and gears
- Power driven machines
- Mechanical advantage

What we tried	What happened

- Why did that happen?
- What type of energy is being used?

### Solving your Challenge

- Brainstorm with your group for ideas.
- Base your ideas on what you have found out about your hands-on science stations.
- You may draw diagrams or write an explanation of the device you have designed to solve your challenge.

## ENERGY CHANGE AND MACHINES STUDENT CHALLENGE #4

Design a train that uses magnetic attraction and repulsion for propulsion as well as for direction changes.

You should first find out about how magnets work and can be switched on and off.

Investigate these hands-on stations:

- Magnetic shuttle (in *Zone 13: Rail Today*)
- Rail into the future (in *Zone 13: Rail Today*)
- Magnetism from electricity
- Floating magnets
- Magnetic field

### SUGGESTIONS FOR INVESTIGATING THE HANDS-ON EXPERIMENTS

Follow the instructions on the device and record what happens.

**To solve your challenge you will need to look closely at the:**

- Objects
- Hands-on experiments
- Information panels at the energy change and machines Science Stations

You will need to use the scientific ideas from the hands-on experiments, not the devices themselves to help solve your challenge.

**Key Ideas:**

- Magnetic attraction
- Magnetic repulsion
- Electromagnetism
- Magnetic levitation

What we tried	What happened

- Why did that happen?
- What type of energy is being used?

### Solving your Challenge

- Brainstorm with your group for ideas.
- Base your ideas on what you have found out about your hands-on science stations.
- You may draw diagrams or write an explanation of the device you have designed to solve your challenge.

## ENERGY CHANGE AND MACHINES STUDENT CHALLENGE #5

Design a theme park ride that does not require constant propulsion by an engine.

You should first investigate how the ride can stay on tracks and be able to start and stop.

Investigate these hands-on stations:

- Train wheels (in *Zone 11: Might & Muscle*)
- Air blast (in *Zone 4: Diesel Revolution*)
- Jumping disc (in *Zone 13: Rail Today*)
- Zone 11: Might & Muscle
- Catenary arch
- Flywheels

### SUGGESTIONS FOR INVESTIGATING THE HANDS-ON EXPERIMENTS

Follow the instructions on the device and record what happens.

**To solve your challenge you will need to look closely at the:**

- Objects
- Hands-on experiments
- Information panels at the energy change and machines Science Stations

You will need to use the scientific ideas from the hands-on experiments, not the devices themselves to help solve your challenge.

**Key ideas:**

- Energy converters
- Energy sources
- Magnetic repulsion
- Forces on tracks

What we tried	What happened

- Why did that happen?
- What type of energy is being used?

### Solving your Challenge

- Brainstorm with your group for ideas.
- Base your ideas on what you have found out about your hands-on science stations.
- You may draw diagrams or write an explanation of the device you have designed to solve your challenge.

## ENERGY CHANGE AND MACHINES STUDENT CHALLENGE #6

A faster and more energy efficient train: consider methods of propulsion as well as track design.

You should first investigate the use of magnets for propulsion and reducing friction.

Investigate these hands-on stations:

- Magnetic shuttle (in *Zone 13: Rail Today*)
- Floating magnets
- Magnetism from electricity
- Flywheels
- Electric motor
- Rail into the future (in *Zone 13: Rail Today*)

### SUGGESTIONS FOR INVESTIGATING THE HANDS-ON EXPERIMENTS

Follow the instructions on the device and record what happens.

**To solve your challenge you will need to look closely at the:**

- Objects
- Hands-on experiments
- Information panels at the energy change and machines Science Stations

You will need to use the scientific ideas from the hands-on experiments, not the devices themselves to help solve your challenge.

Key ideas:

- Magnetic forces
- Electromagnetism
- Energy storage
- Energy converters
- Balancing forces

What we tried	What happened

- Why did that happen?
- What type of energy is being used?

### Solving your Challenge

- Brainstorm with your group for ideas.
- Base your ideas on what you have found out about your hands-on science stations.
- You may draw diagrams or write an explanation of the device you have designed to solve your challenge.
